business

Perhatikan **kode etik** ya!

Export chat history

You can use the export chat feature to export a copy of the chat history from an individual or group chat.

Note: This feature isn't supported in Germany.

- 1. Open the individual or group chat.
- 2. Tap More options > More > Export chat.
- 3. Choose whether to export with media or without media.

An email will be composed with your chat history attached as a .txt document.

Note:

- . If you choose to attach media, the most recent media sent will be added as attachments.
- . When exporting with media, you can send up to 10,000 latest messages. Without media, you can send 40,000 messages. These constraints are due to maximum email sizes.
